

# TLT 6

## THE ESSENCE OF SPEED TOURING

The TLT6 is the latest iteration of our TLT (Tour Lite Tech) concept – boots that set the standard for lightness, performance and agility. With the TLT6, one can easily cover long distances in tour mode and then navigate technical descents in ski mode. When it comes to ski expeditions on the highest mountains in the world, the TLT6 excels – climbing ice, mixed and rock with ease. No other AT boot – in the world – provides such a wide range of use. The TLT6 is now warmer (thanks to additional insulation and a new liner), easier to use (thanks to a softer optional tongue and a micro adjustable instep buckle) and more comfortable (thanks to a new last).

1) TLT6 ULTRA-LOCK SYSTEM 2.0

2) DRIVING SPOILER 2.0

3) DOWNHILL-BOOSTER TONGUE

7) QUICK STEP-IN INSERT

8) CLAW SOLE

9) ULTRA LOCK STRAP

10) FORWARD LEAN INSERT

**1) ULTRA-LOCK SYSTEM 2.0.** The new articulated cuff buckle ULTRA LOCK SYSTEM 2.0, which, when compared to the previous version, reduces lateral snag, unhampering the transition from SKI to WALK mode and reverse.

**2) DRIVING SPOILER 2.0.** The rear spoiler (patent pending) slides inside the cuff, allowing the widest and smoothest cuff rotation possible. Once the Ultra-Lock system is closed, it becomes locked with the cuff, building a super-stiff downhill structure. It also alleviates friction between the cuff and inner liner, which keeps the heel in place for better walk-ability and no blisters. The new metal spoiler insert allows the user to adjust forward lean by simply removing or reassembling two fastening Torx screws.

**3) DOWNHILL BOOSTER TONGUE.** The innovative triple-tongue system (Patent Pending) guarantees maximum freedom of movement during ascents and surprisingly precise performance during descents with the „Downhill Booster“ tongue inserted into the shell. The Booster Tongue, which can be slotted in place or removed in an instant, enables the skier to achieve the best performance possible, but the boot can also be used without it for both climbing and descending depending on the conditions.

**4) BUCKLE CATCHES.** These toothed buckle catches (patent pending) are designed to match the Ultra-Lock System and Step-in buckle. Made of magnesium, the buckle catch adjusts to different leg and foot shapes with a unique retain system that prevents unintentional releases. The in step buckle also provides a micro adjustment.

**5) LOWER SHELL.** The TLT6 features the shortest, most compact and rockered lower shell on the market (a mere 297mm in a 27.5 shell size). This provides incredible agility and walk-ability. This shell is composed with Grilamid®, the lightest and stiffest polymer on the market. The new last provides an incredible level of comfort in the forefoot and instep area, while leaving downhill performance unchanged.

**6) INSULATION LAYER.** An additional felt/aluminum layer increases the general level of insulation.

**7) QUICK STEP-IN INSERT.** The patented Quick-Step-In inserts provide 70% easier step-in to Dynafit bindings.

**8) CLAW SOLE.** A mountaineering-focused outsole provides better grip and traction on the most difficult terrain. The toe and heel areas are made of a durable and sticky compound for the best climbing performance. This special construction enables one to easily resole the toe and heel area, if need be.

**9) ULTRA LOCK STRAP.** The Ultra Lock Strap guarantees maximum performance from the boots, ultra-precise ski control as well as improved comfort by completely eliminating extra space between tongue and shin bone, and thus reducing shin bash.

**10) FORWARD LEAN INSERT.** Unscrewing the screws and refastening the insert 180° opposite, it's possible to adjust the forward lean of 3°.
