

BOOTS

MOTION LOCK SYSTEM

MAKES TRANSITION FROM SKI MODE TO WALK MODE EVEN EASIER AND MORE INTUITIVE.

ULTRA LOCK STRAP

GUARANTEES MAXIMUM PERFORMANCE FROM THE BOOTS, ULTRA-PRECISE SKI CONTROL.

ULTRA LOCK SYSTEM 2.0

THE ULTRA LOCK SYSTEM 2.0 IS THE EVOLUTION OF OUR PATENT, WHICH LIMITS THE LATERAL SNAG IN WALK MODE.

DOWNHILL BOOSTER TONGUE

ADDING THE TONGUE IMPROVES THE FORWARD SUPPORT AND THE DOWNHILL PERFORMANCE.

DRIVING SPOILER 2.0

IT ALLOWS THE WIDEST AND SMOOTHEST CUFF ROTATION AND A STIFF DOWNHILL STRUCTURE.

PEBAX FRONT CUFF

THIS UNIQUE TECHNOLOGIE PROVIDES STIFFNESS AND FLEXIBILITY EXACTLY WHERE IT'S NEEDED.

FORWARD LEAN INSERT

UNSCREWING THE SCREWS AND RE-FASTENING THE INSERT 180° OPPOSITE, IT'S POSSIBLE TO ADJUST THE FORWARD LEAN OF 3°.

QUICK STEP IN

THE PATENTED QUICK-STEP-IN INSERTS PROVIDE 70 % EASIER STEP-IN TO DYNAFIT BINDINGS.

DYNAFIT'S NEW FREETOURING LINE – PERFORMANCE WITH NO COMPROMISE AND HALF THE WEIGHT!

A completely new way of thinking...

Why do the best downhill performing boots have to be heavy? Why can't they have good walk-ability? Why do they have to offer 4 buckles and an "old school" construction? That's what we were asking ourselves as we designed this new line. As a contributor to our development team, that's also what Eric Hjorleifson was asking. The answers are the Vulcan and the Mercury. Two boots which combine the innovations and the patents of our TLT 5 line with un-rivalled skiing performance.

VULCAN

1) INTERNAL CUFF STOPPERS – The new articulated cuff buckle ULTRA LOCK SYSTEM 2.0, which, when compared to the previous version, reduces lateral snag, unhampering the transition from SKI to WALK mode and reverse.

2) DRIVING SPOILER 2.0 – The rear spoiler (patent pending) slides inside the cuff, allowing the widest and smoothest cuff rotation possible. Once the Ultra-Lock system is closed, it becomes locked with the cuff, building a super-stiff downhill structure. It also alleviates friction between cuff and the inner liner, helping retain your heel in place for better walk-ability and no blisters. The new metal spoiler insert allows the user to adjust forward lean by simply removing or reassembling two fastening Torx screws.

3) DOWNHILL BOOSTER TONGUE – Add this super stiff tongue to improve the forward support and the skiing performance. This will allow you to drive any ski on the market. Remove the tongue for the uphill, or for a softer and more forgiving forward flex.

4) SWITCH POWER STRAP – The Vulcan's power strap can be removed from the rear cuff attachment and fixed to the downhill booster tongue. The advantages of this system are clear: the tongues cannot be lost because they are linked together and a velcro band doesn't limit comfort and range of motion while walking.

5) INTERNAL CUFF STOPPERS – two additional stoppers (Patent pending) add stiffness to the cuff structure. These two removable inserts can be adjusted according to user preference (the second comes in the box).

6) CENTRAL 45° BUCKLE SYSTEM - For this new line we developed a new innovative central buckle which is anchored exactly on the shell pivot points. It offers the maximum heel retain on uphill and downhill. Once tightened it also keeps the cuff and shell compressed and makes the full structure stiffer.

7) BUCKLE CABLE RETENTION SYSTEM – Cuff and central buckle catches are developed with a unique retain system which prevents any kind of unwanted release. It also makes un-necessary any kind of tensioning tuning on the summit for the downhill mode if set correctly at the start of the tour.

8) INSULATION – A 3mm polyethylene layer provides adequate insulation.

9) FLEX TONGUE DESIGN – The unique shell construction is completed with a soft flex tongue which keeps the snow out and doesn't interfere with the cuff rotation. Fixation on the shell with rivets also improves its torsional rigidity.

10) QUICK STEP-IN INSERTS – The patented Quick-Step-In inserts provide 70% easier step-in to Dynafit bindings.

11) DYNAFIT PRO FREERIDE SOLE – The sole features 3 different rubber compounds: soft for the best grip (black), hard for compression resistance on the modern STEP-IN freeride bindings (grey) and medium as the best compromise between grip and abrasion resistance (green).
