

WINTER GUIDE GTX®

WINTER GUIDE GTX® 61505

5316 green/black, 1540g (size 27.5), 22.5 – 31.5 + 1/2 sizes

The new Winter Guide GORE-TEX® Boot has been designed for those who prioritize warm, dry feet throughout the day, and those who are looking for long-lasting comfort, such as professional mountain guides. In addition to easy-to-use features, walking comfort, and reliable skiing performance, the boot's internal microclimate is regulated by a liner with a revolutionary patented construction, combined with GORE-TEX® Performance. The liner's breathable, waterproof membrane allows water vapor to escape through the perforations present throughout the surface of the liner, ensuring the wearer's feet stay dry. This hi-tech liner is housed in a Pebax® shell which provides outstanding natural walking movement and liberal range of cuff rotation, as well as superior skiing performance. You will be amazed by the boot's ease of transition from ski to walk mode; with just one motion the Ultra Lock System 2.0 locks the cuff and at the same time transitions the boot from walk to ski mode and vice-versa. The sole unit is compatible with all ski touring bindings currently on the market which meet the approved standard.

SHELL PEBAX® • CUFF/SPOILER PEBAX®
 • SKI/WALK ULTRA-LOCK SYSTEM 2.0
 • FORWARD LEAN 15°-18° + RELEASE FOR WALKING • RANGE OF MOTION 60°
 • SOLE DYN PRO TOURING

BINDING: DYNAFIT QUICK STEP-IN STANDARD TOURING

LINER: GORE-TEX® CUSTOM READY

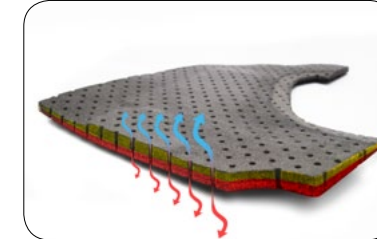

LONG LASTING CLIMATE COMFORT FOR MOUNTAIN PROFESSIONALS

Never have your feet been so warm and dry after so many hours in the snow. The Winter Guide GTX® boot has been designed for mountain professionals, mountain guides, and ski tourers looking for all-day climate comfort. The liner, with its revolutionary patented construction, combined with GORE-TEX® Performance technology, keeps feet dry thanks to the unique characteristics of the EPTFE membrane. This concentration of technology is packed into a boot which is easy to use, and delivers tried and trusted walking comfort and ski performance developed as part of the Neo Boot project from which the Winter Guide GTX® is derived.

1) LINER WITH GORE-TEX® MEMBRANE

2) DUAL-DENSITY FOAM WITH VENTILATION HOLES

3) ULTRA LOCK SYSTEM 2.0

4) DRIVING SPOILER 2.0

8) QUICK STEP-IN INSERT

10) DYN PRO TOURING SOLE

11) ULTRA LOCK STRAP

12) FORWARD REAR INSERT

1) LINER WITH GORE-TEX® MEMBRANE. Finally. Warm, dry feet – all day long. Long-lasting thermal comfort and management of the internal microclimate around the foot are finally within reach of ski tourers thanks to this revolutionary patented liner, combined with GORE-TEX® Performance technology. The breathable, waterproof EPTFE membrane lets water vapor escape through the perforations present throughout the surface of the liner, ensuring the wearer's feet stay dry.

2) DUAL-DENSITY FOAM WITH VENTILATION HOLES. Unparalleled ventilation across the entire surface of the foot, thanks to patented double-density foam with ventilation holes in the liner. The external polyethylene surface affords greater resistance to abrasion and provides more support to the foot when skiing, while the internal PE is softer and more shaped to cradle the foot and enhance comfort.

3) ULTRA-LOCK SYSTEM. The new articulated cuff buckle ULTRA LOCK SYSTEM 2.0, which, when compared to the previous version, reduces lateral snag, unhampering the transition from SKI to WALK mode and reverse.

4) DRIVING SPOILER 2.0. The rear spoiler (patent pending) slides inside the cuff, allowing the widest and smoothest cuff rotation possible. Once the Ultra-Lock system is closed, it becomes locked with the cuff, building a super-stiff downhill structure. It also alleviates friction between the cuff and inner liner, which keeps the heel in place for better walk-ability and no blisters. The new metal spoiler insert allows the user to adjust forward lean by simply removing or reassembling two fastening Torx screws.

5) BUCKLE CABLES RETENTION SYSTEM. Cuff and central buckle catches are developed with a unique retain system which prevents any kind of un-wanted release. It also makes unnecessary any kind of tensioning tuning on the summit for the downhill mode if set correctly at the start of the tour.

6) LOWER SHELL. The NEO line features a new shell developed around our newest last. It is an evolution of our TLT6 fit, similar downhill performance but slightly wider. The injection technique and the open design allow us to inject the stiffest plastic materials available.

7) INSULATION. A 3mm polyethylene layer provides adequate insulation.

8) QUICK STEP-IN INSERT. The patented Quick-Step-In inserts provide 70% easier step-in to Dynafit bindings.

9) FLEX TONGUE DESIGN. The unique shell construction is completed with a soft flex tongue which keeps the snow out and doesn't interfere with the cuff rotation. Fixation on the shell with rivets also improves its torsional rigidity.

10) DYN PRO TOURING SOLE A new Dynafit exclusive bi injected outsole, developed with the most durable rubber compounds on the extremities and a stickier rubber compound in the center.

11) ULTRA LOCK STRAP. The Ultra Lock Strap guarantees maximum performance from the boots, ultra-precise ski control as well as improved comfort by completely eliminating extra space between tongue and shin bone, and thus reducing shin bash.

12) FORWARD LEAN INSERT. Unscrewing the screws and refastening the insert 180° opposite, it's possible to adjust the forward lean of 3°.
