

PERFORMANCE PLATFORM

The HEAD 360° platform is the integrated approach ensuring our performance apparel is designed to respond to skiers' needs. Comfort Management, Ergonomics and Pro Engineering form the pillars of our research, design and development process.

COMFORT MANAGEMENT

ERGONOMICS

PRO ENGINEERING

COMFORT MANAGEMENT

EXO PHASE 3 Layer fabric

Engineered face fabric = seamless performance mapping.
Membrane made of 100% PES delivering a water column of 15.000mm / 15.000 g/m²/24h breathability (MVTR).

EXO PRO

Membrane made of 100 % PES delivering a water column of 20.000mm / [10.000 - 20.000] g/m²/24h breathability (MVTR)

EXO ACTIVE

Membrane made of 100 % PES delivering a water column of 10.000mm / [10.000 - 20.000] g/m²/24h breathability (MVTR)

EXO BASE

Waterproof & breathable protection - just right to keep you dry and comfortable.

ENDO DOWN

ENDDown representing a 90/10 insulation using 90% high quality down and 10% feathers.

ENDO THERM

Polyester insulation, trapping air and creating warmth without reducing breathability and moisture management.

ENDO COOL

Cooling dot print located on the fabric inside accelerating the wicking process, providing an instant and prolonged cooling effect.

ENDO DRY

Keeping the skin dry by facilitating moisture management.

ERGONOMICS

ERGO FIT

Ergonomically engineered & tailored patterns, providing perfect fit for the intended end use and look.

ERGO STRETCH

Using only durable ERGOstretch® materials, knits & elastic wovens supporting perfect fit and mobility.

ERGO FEATURE

Functional and intuitive features enhancing the ease of use.

ERGO LINK

Apparel features interacting perfectly with HEAD hardgood.

PRO ENGINEERING

MMT

- Cutting
- Bonding
- Welding
- Glueing

AMPT

Advanced Material & Product Technologies

PrimaLoft is the leader in fiber research and development for high performance insulations and yarns. All PrimaLoft products are BLUESIGN certified.

TENCEL® is the lyocell fiber from the house of Lenzing. It is of botanic origin, since it is extracted from the raw material wood. Fiber production itself is extremely eco-friendly, due to the closed loop system. Textiles of TENCEL® are more absorbent than cotton, softer than silk and cooler than linen.

All our garments use YKK zippers. YKK is the world's largest zipper company and offer one of the best qualities on the market. Head uses Water-tight™ Vislon Front Zipper to seal out wind, rain and snow. They provide you more protection and durability.

EXO PHASE™

NEXT LEVEL BODY MAPPING

We proudly introduce the HEAD EXO PHASE technology, a game changing material innovation and new garment design direction that significantly increase your comfort, performance and active fit. A first in this industry, EXO PHASE constantly adapts to body needs, increasing warmth during periods of low activity, like when you are sitting on a ski lift, then reducing overheating and removing sweat during high activity.

The technology is also clearly visible to the naked eye: You can literally see and feel how the varied multifunctional surface textures will help you go beyond your limits in a heartbeat. In a nutshell: The 3D shaped and almost seamfree minimalist design is engineered to adapt to weather conditions, your activity and body movement when and where you need it most. The new EXO PHASE technology makes its special debut in several products so you can get equipped with the ultimate no matter which sport you prefer.
