

THE ALPINE FIT

100% BLISTER-FREE

TREK BALANCE KNEE SOCK

Comfort and thermoregulation throughout the ascent, without losing a millimeter of precision: Trek Balance Knee Socks are the winning choice for trekking enthusiasts looking for a reliable, comfortable sock. Thanks to the Nano Glide® treatment and zoned paneling, elastic and reinforcement, unwanted friction and sock movement is eliminated: 100% BLISTER-FREE! Thermo regulation and insulation are provided by a Thermocool® Merino wool fiber mix, to ensure lasting comfort and a natural feel on the skin.

IDEAL MATERIALS FOR ALPINE COMFORT 100% BLISTER-FREE

COMFORT

NANO *GLIDE*

To reduce to the minimum friction between skin and fabric we use a special treatment with PTFE, a material which has the second lowest coefficient of friction of all the solid materials known to man. Exceptional. And it is also extremely hydrophobic, so sweat is immediately wicked away by the sock.

ISOLAMENTO TERMICO

Nature gives us an excellent thermal regulator: Merino wool. Dry feet which breathe thanks to this natural fiber, which is even capable of absorbing odors and has self-cleaning properties.

Dry and warm: this combination of soft yarn in ultra-thin polyester fiber and Merino wool guarantees exceptional thermal insulation and rapidly wicks away moisture from the skin, whilst at the same time trapping in warmth and ensuring feet can breathe correctly, even in the coldest conditions.

Thermocool® optimizes the natural thermal regulation capabilities of the human body, thanks to a fiber cross-section which creates channels capable of enhancing the evaporation of moisture and providing insulation at the same time.

CLIMATE CONTROL

Combining the warm touch of cotton with indispensable rapid drying: Drirelease® Cotton dries four times faster than normal cotton thanks to the FreshGuard treatment, keeping the garment odor free.

Warmer than wool: Drirelease® Wool is designed to provide excellent thermal insulation, reducing at the same time the sensation of clamminess on the skin. In addition, it does not irritate the skin and thanks to the FreshGuard treatment the garment stays odor free.

Feet stay dry and healthy thanks to this fiber designed to ensure rapid wicking of moisture away from the skin and limit heat loss thanks to the use of polypropylene fibers.

CORDURA®

Durable and abrasion resistant: this polyamide fiber boasts excellent mechanical properties combined with an extremely light weight. Perfect for preventing holes and abrasion in the most critical points in socks.
