

Turn your iPhone into a dive computer.

Dive mode

All information at a glance, more eye candy and recorded more quickly than ever before. The dive display shows all relevant key figures in a clear, structured manner. All notifications are visually supported. Some transmitter manufacturers even show air integration.

Beach mode

All the great pre-dive moments can also be captured as images or videos, with the Smartphone reliably protected against water and sand in its capsule. The home screen promptly shows all relevant data from the last dive.

All-rounder

We offer a wide range of additional interface modes for anyone who likes things structured differently on the display. For example, you can choose from the following: O Normal mode O Night mode O Lady mode O Tactical mode (from February 2016)
