

While touring skiers like to give off a laid-back, naturalist image, they are in fact among the most demanding audiences when it comes to their gear.

They have a good reason for this demand; once you head out off the prepared terrain you're at the mercy of the mountain at all times, from temperature swings and storms to the entire range of snow conditions. You need equipment you can rely on. The skis must be light to save energy on the ascent and have to deliver outstanding on-snow performance in all conditions and for every conceivable descent. We understand when we develop these skis that they must provide top

performance and lightweight designs without compromising on stability. Völkl touring skis typically rank as among the lightest on the market—but also boast unmatched ski performance. The use of weight-optimized Multilayer Wood-core Light cores and the sophisticated construction of the ski have once again brought weight improvements that will especially benefit freeride-minded touring skiers thanks to the improved power transfer and high rigidity.

## SKIN PIN

A skin clamping system that's been reduced to the essentials: Perfect attachment yet extremely simple to use, meaning full functionality without the unnecessary extras! The skin is affixed to the ski's tip using a built-in pin. One 90-degree rotation and it's attached.

The result is a 100% reliable mount. The system can be checked visually from above, ensuring the touring skier has complete control at all times. In a pinch, the hole in the ski tip can also be used to convert the skis into a rescue toboggan or a sled.

**01**  
Each Völkl skin is perfectly cut for the respective touring ski model.

**02**  
To apply the skin, push the SKIN PIN through the eyelet from below and "hang" it into the ski.

**03**  
All that's needed to fix the SKIN PIN and Völkl skin in place is one 90-degree rotation. The skin can now be precisely aligned and adhered.

## VACUUM SKINS

We are introducing our VACUUM skins to supplement our classic collection of skins. These new skins are 'glue less', with no need to apply the annoying adhesive layer. It works with a high-quality multilayer construction where each layer provides outstanding functionality.

For all informations about the new VACUUM skins and all available lengths please check on page 99.
